

**User Story Number:** US005.15

**User Story Name:** Add Claim Number-SSN to the First Pass Elements

**Priority:** High

**ClearQuest Number:** DAS\_CR373

**Author:** Charisse Dean

**Function Points:**

**Story Points:**

**Story:** As a consuming application, I want Virtual Lifetime Electronic Record (VLER) Data Access Services (DAS) to send Claim Number – Social Security Number (SSN) in the (first pass) pick list in response to a request for exam results, so that the user of the consuming application can make selections using the Claim Number – SSN data.

#### Revision History

Date	Version	Description	Author/Reviewer
01/08/2013	v0.01	Draft	Charisse Dean
01/15/2013	V0.02	Analyst Review	Analyst Team

1/31/2013	V0.07	DAS PM	Karrrie Stapleton & Kenneth Brunetto
2/5/2013	V1.0	Formal Review - Approved	William G. Jackson

#### Background

Interested parties must retrieve stored exam results to review and adjudicate disability claims. An example of how this functionality may be used is as follows:

Veterans Benefits Administration (VBA) must retrieve stored exam results, in order to automate disability rating calculations for VBA Ratings Specialists. VBA Ratings Specialists will retrieve all exam results that have an associated claim established.

Producing applications send the Claim Number - SSN information to VLER DAS with the exam result. VLER DAS sends this information for storage to the Health Data Repository (HDR) with

the exam result. This allows VLER DAS to return the Claim Number – SSN data element in the first pass picklist to the consuming applications.

### Conversation

1. VLER DAS receives a request from a consuming application for a list of exam results. The consuming application will submit (filtered) single or multiple selection criteria.
2. VLER DAS applies filters to the exam results in accordance with the single or multiple selection criteria that was submitted with the request.
3. VLER DAS sends a list of available exam results.
4. Add Claim Number – SSN to the common data elements included in the first-pass pick list that VLER DAS sends for each available exam result to the consuming application.

**Note:** Items ‘a – h’ are documented in other user stories. This user story only adds item ‘i’ to the common data elements.

- a. Patient Information (First Name, Middle Name, Last Name, Date of Birth, ID, DAS Assigning Authority (contains Assigning Facility))
  - b. Document ID
  - c. Disability Benefit Questionnaire (DBQ) Document Type
  - d. Creation Date (Date, Time, and Time Zone)
  - e. Date Status Modified (Date, Time, and Time Zone)
  - f. VA Facility Information (Name, ID, Assigning Authority)
  - g. Physician Information (First Name, Middle Name, Last Name, Assigning Facility or Assigning Authority)
  - h. Exam Result Status
5. The consuming application sends the Uniform Resource Locator (URL) for a specific exam result from the first pass pick-list to VLER DAS. VLER DAS processes the request for a specific exam result. This request and response for a specific exam result is called the second pass.
  6. VLER DAS sends the specific exam result requested to the consuming application (second pass).
  7. VLER DAS sends the requested exam result to the consuming application (second pass) each time the user selects a subsequent item from the same pick-list.

### Detailed Listing of Acceptance Criteria

Requirement ID	Description
US005.15.01	Each entry in the first pass pick-list sent by VLER DAS to the consuming

Requirement ID	Description
	application includes the common data element Claim Number - SSN for each available exam result.

**Constraints**

1. VLER DAS can only retrieve and send available first pass data elements stored in HDR. For example, if physician name is not present in the exam result when stored, then VLER DAS cannot return the physician name in the first pass pick-list.
2. VLER DAS can only return exam results that have the data elements used in the filter stored with the exam results.

**Assumptions**

1. The producing applications are responsible for the validity of the exam result data.
