Introduction

In 2014, the VHA launched the first EBP psychotherapy template for storing health factors in the larger VHA Clinical Data Warehouse (CDW). As a result of the VHA adopting the VA/DoD Management of Post-Traumatic Stress Disorder Clinical Practice Guideline (PTSD CPG) (2017 and 2023), there has been increased implementation of many recommended treatments. These include Eye Desensitization and Reprocessing (EDMR) and Written Exposure Therapy (WET). This created a documentation and tracking challenge, as the VA has not expanded their template suite to include all the recommended CPG treatments for Post-Traumatic Stress Disorder (PTSD).

This new template allows capture of all recommended PTSD Evidenced Based Therapy and increases ability to track MBC. It also simplifies tracking of PTSD EBPs and MBC.

This template will be added to your shared template folder and can be added to any note.

Sites can also decide to add to an existing local note title if they would like to.
