Introduction

The Clinical Assessment Reporting and Tracking (CART) Program and the Pain Management, Opioid Safety and Prescription Drug Monitoring Program (PMOP) programs seek an improved process to better assess pain management quality throughout the VA.

The CART Program helped create this template to gain information on pain management quality throughout the enterprise, with health factors serving as the defined data fields.

The Pain Management, Opioid Safety and Prescription Drug Monitoring Program (PMOP) will use the data to provide national and regional information on the quality of pain management.

Providers can incorporate the template into a clinical encounter note to document pain management during clinical care.

Representative user(s): Clinical providers that participate in pain management.

This template will be added to your shared template folder and can be added to any note.
